

Level of Education

6. The comparative shares of literate bespeak improvement in the profile of educational attainment (60.0%, 60.7%). The share of *No formal education* remains same (0.4%, 0.4%). All categories seem to be on rise except a sort of enervation in the case of *below matric* (38.1%, 37.5%). Generally, males are more educated compared to females. See table-4 and Statistical Table-3 (Annex-III).

Migration

7. Proportion of migrants and size of population seem to be correlated positively. In this regard, provinces make a descending sequence of Punjab (68.2%), Sindh (20.6%), KP (10.5%) and Balochistan (0.7%). Migration increases in KP (8.7%, 10.5%), decreases in Punjab (69.4%, 68.2%) and Sindh (21.2%, 20.6%), while levels same in Balochistan (0.7%, 0.7%). Sex disaggregated proportions show slight variations vis a vis overall configuration. Further, in collation with proportions of females, the proportions of male migrants are higher in all provinces except in Punjab.

8. *Inter provincial migration* indicates positive association with the level of urbanization and economic development. The proportions of inter provincial migrants is sequenced in the decreasing order of Punjab (45.4%), Sindh (34.8%), KP (18.7%) and Balochistan (1.1%). Inter-provincial migration is on rise in Sindh and KP while recedes in Punjab and Balochistan. In comparison with the proportions of males, the proportions of female migrants are higher in all provinces except in KP.

9. The proportion of *intra provincial migrants* bespeaks positive nexus with the size of population. Provinces form expected sequence in the order of Punjab (74.6%), Sindh (16.7%), KP (8.2%) and Balochistan (0.6%). Similar pattern obtains by sex. Intra-provincial migration increases in KP (6.8%, 8.2%) and Punjab (74.4%, 74.6%), recedes in Sindh (18.2%, 16.7%) while levels same in Balochistan (0.6%, 0.6%). Similarly, proportion of male migrants is higher than of female migrants in all provinces save in Punjab. See table-5 & 5.1 and Statistical Tables-11 (Annex-III).

10. Streams of migration flow within and between urban and rural areas. Since urbanization is the inevitable concomitant with the process of economic development, rural to urban migration steals most of the limelight due to enormity of consequential demand on the socio-economic resources.

11. **Rural to urban migration** accounts for less than a quarter (22.5%) of the total flow of migrants within and between areas. Males are more savvy to go urban (24.7%) compared to females (21.1%). Proportions by province form a descending sequence of Balochistan (43.8%), Punjab (25.1%), KP (21.1%) and Sindh (13.9%). Proportions by sex are higher for males in Punjab and Balochistan while lower in KP and Sindh.

12. As for change during the comparative periods, the rural to urban migration is on wane in total and in all provinces except in Balochistan. The change is more pronounced for males. See table 5.2 and Statistical Table-11 (Annex-III).

Reasons of Migration

13. According to the size of the relevant proportions, the *marriage* (34.2%) and movement *with parents* (20.5%) constitute the foremost reasons for migration. The former is proffered more by females while the latter's calculus owes more to males than females. Migration *with spouse* (12.1%) and *homecoming* (8.8%) make the next important couplet. Again, the former is related more by females while the latter is determined more by males than females. *Searching for job* (5.8%) and *found a job* (5.8%) is the next couplet of reason narrated more by males than females.

14. Assorted *other explanation* (3.0%) and *change of residence* (2.3%) are the fourth most important set of reasons, put forth more by males than females. *Security/law & order situation* (1.4%) is the triplet of reason, all reported by males except the last one. The last triplet of reason is *job transfer* (1.7%), *searching for better agriculture land* (1.0%) and *education* (0.9%), all related more by males than females.

15. As for change during the period marked by the consecutive surveys, the comparative figures of most of the salient reasons seem to be on wane while rests of the categories are characterized with marginal changes. See table-6 and Statistical Table-13 (Annex-III).

Migrants Employed by Employment Status

16. More than eight out of ten (82.5%) of migrants are either *employees* (48.3) or *own account workers* (34.2%). Near one in seven (14.7%) are *contributing family workers* and one in thirty three (2.8%) are *employers*. More males than females are engaged as *employees* (52.6%, 35.1%) and *own account workers* (37.6%, 23.6%) while more females than males work as *contributing family workers* (41.2%, 6.1%). *Employers* seem to be masculine in composition. As for change during the comparative period, *employees* and *contributing family worker* scale down, *own account workers* level same while *employers* trend up. See table-7 and Statistical Table-14 (Annex-III).
